

## **ABSTRACT OF THE DISCLOSURE**

A cushion fabric generally includes a first breathable layer, a filter layer and a second breathable layer, which are integrally combined together by hot pressing approach. Wherein the first and second  
5 breathable layers are made of non-woven fabrics, the filter layer contains active carbon, thereby this cushion fabric can be applied to producing variety of commodities, such as sofa cushion, inner sole, anti-skidding mat, carpet, gauze mask and the likes, such that the commodities will not only have good breathing ability but also can isolate the organic poison  
10 from outside and eliminate the unpleasing odor of the air.
